

Instructions to use the Application.

1. Open the application and type the city name in the search field to see the current temperature of that city.
2. Select the temperature unit either Celsius or Fahrenheit.
3. Then click on the **Get Weather** button.
4. You will see the result.

Features and Functionality

- Display the current weather conditions for the specified location.
- Display the details such as temperature, humidity, wind speed, and weather description.
- If the search field is empty or location entered by the user is not found, then it will display the message which guides the user to enter correct data.
- users can switch between temperature units (e.g., Celsius and Fahrenheit).
- Made the website responsive so it can work well on all devices.
